

# ABSTRACT

In an apparatus for feeding articles to a transferring line leading to a container filling machine, a conveyor moves a plurality of articles to an inlet section of the apparatus, where a plate moves vertically from the inlet section to an outlet section of the apparatus, where the articles are to be released. A plurality of collecting magazines are placed at the outlet section for receiving and piling the articles and then a pusher moves the articles situated in a pile in each collecting magazine to a related box of a box transferring line.
